PANORAMA®

IT'S IMPOSSIBLE TO SEE
THE PERFORMANCE OF THE
WHOLE APPLICATION UNLESS
YOU CAN SEE ALL THE PARTS.

See it all ...

analyze it all ...

Altaworks.

*Solutions for
Application Quality Management*

www.altaworks.com

Most application performance management tools focus on a single tier within the Web infrastructure. But in order to identify performance problems in your complex distributed BEA® WebLogic application, you need to see the bigger picture.

Altaworks Panorama provides a premium vantage point. It enables you to see your application as a system and supplies you with detailed, end-to-end visibility of the entire Web enterprise. For ISVs, this translates into the valuable ability to pinpoint performance problems—reliably and easily—when you're integrating your application into each unique customer environment.

Panorama monitors and captures thousands of discrete metrics across multiple tiers of the application infrastructure. It distills and correlates key metrics down to the system resource and method levels, and automates the identification of the dependencies of poor performance. As a result, you'll be able to focus the appropriate resources on fixing the problems, reducing costly troubleshooting and shortening your release cycles.

Spare yourself—and your customers—the high cost of diagnosing performance problems with point products that assume you know where to look. Optimize your application performance and see it all with Altaworks Panorama.
